

Website Traffic Analysis Report

1. Executive Summary

This report presents an analysis of website traffic data to understand patterns in visitor activity, geographic distribution, content engagement and traffic trends.

The analysis identified the most active countries and cities, high-performing artists, albums and tracks, frequently accessed links, and periods of higher website activity. These findings can help Alfido Tech improve its digital content strategy, target high-performing markets and optimize website engagement.

2. Objectives

The main objectives of this analysis were to:

- Clean and prepare the website traffic data.
 - Analyse the distribution of website events.
 - Identify high-traffic countries and cities.
 - Identify popular artists, albums and tracks.
 - Analyse frequently accessed links.
 - Examine daily and monthly traffic trends.
 - Identify important business insights.
 - Recommend improvements to increase website engagement and conversions.
-

3. Dataset

The analysis was performed using the **Website Traffic Analysis** dataset obtained from Kaggle.

The dataset contains event-level information including:

- Event
- Date
- Country
- City
- Artist

- Album
 - Track
 - ISRC
 - Link ID
-

4. Key Findings

Traffic Activity

The dataset contains **[TOTAL EVENTS]** recorded events. The most frequently occurring event was **[TOP EVENT]**, indicating the most common type of interaction in the available traffic data.

Geographic Performance

[TOP COUNTRY] generated the highest website activity with **[NUMBER]** events.

Among known city records, **[TOP CITY]** recorded the highest traffic with **[NUMBER]** events.

This indicates that these geographic markets could be important targets for future digital campaigns.

Content Performance

The most active artist was **[TOP ARTIST]**, with **[NUMBER]** events.

The most popular album was **[TOP ALBUM]**, while **[TOP TRACK]** was the most frequently associated track.

These high-performing content areas can be prioritized for further promotion and engagement strategies.

Link Performance

[TOP LINK ID] was the most frequently accessed link, receiving **[NUMBER]** events.

High-traffic links should be reviewed to understand what makes their associated content attractive to visitors and to identify opportunities for improving other website areas.

Traffic Trends

The analysis of daily traffic identified **[BUSIEST DAY]** as the busiest day, with **[NUMBER]** events.

The highest monthly traffic was recorded during **[PEAK MONTH]**, with **[NUMBER]** events.

These patterns can help in planning content releases and digital marketing campaigns during periods of higher activity.

5. Business Insights

The analysis shows that website activity is concentrated around certain geographic locations and content categories. High-performing artists, albums, tracks and links represent areas of strong audience interest.

Daily and monthly traffic patterns also provide useful information for planning campaigns and content publication schedules.

However, the dataset is event-level and does not contain user IDs, session IDs, timestamps, landing-page URLs, exit-page URLs or referral-source information. Therefore, true sessions, bounce rate, average session duration, landing pages, exit pages and referral-source performance could not be calculated reliably.

6. Recommendations for Alfido Tech

1. Promote High-Performing Content

Increase promotion of the artists, albums and tracks that generate the highest traffic to improve audience engagement.

2. Target High-Traffic Locations

Focus digital campaigns on countries and cities that generate strong website activity.

3. Optimize High-Traffic Links

Review frequently accessed links and ensure that their associated content is relevant, easy to navigate and optimized for user engagement.

4. Use Peak Traffic Periods

Schedule important content releases and marketing campaigns around days and months with higher website activity.

5. Improve Website Tracking

Implement user IDs, session IDs, timestamps, landing pages, exit pages and referral-source tracking. This will allow future analysis of sessions, bounce rate, session duration and conversion journeys.

7. Conclusion

The website traffic analysis provides useful insights into geographic activity, content performance, link engagement and traffic trends.

The findings can help Alfido Tech make data-driven decisions regarding content promotion, geographic targeting, website optimization and campaign timing.

Improving website tracking infrastructure will further enable detailed user-journey and conversion analysis in the future.
